## PaperWise v6.5.5 Accumulated Hot Fixes

This document lists changes released as hot fixes to Paperwise version 6.5.5. Paperwise Support can provide the hot fix files and instructions on how to deploy them in your environment.

### Contents:

Client Application Updates .....	2
Server Application Updates .....	4
Remoting aka Proxy Server Updates .....	5

## Client Application Updates

---

**Product:** Query

**Hot Fix:** 1008487

**Compatibility:** v6.5.5

**Description:**

Fix for error 372 when loading Query after updating Adobe Acrobat. Resolves the GUID clash between Microsoft's DSOFramer.ocx and Adobe's SelectPageRange.ocx files. This fix prevents the need to disable Adobe updates or continual registration of DSOFramer.

---

**Product:** SendTo

**Hot Fix:** 796003

**Compatibility:** v6.5.5

**Description:**

Fix for error 70 permission denied. Added ability to set the temporary folder SendTo uses for documents before they are submitted into Paperwise.

---

**Product:** SendTo

**Hot Fix:** Addition

**Compatibility:** v6.5.5

**Description:**

Added method for automation that will load the selected document thumbnail into the Viewer. Added associated enumeration to the SendTo ExecuteFunction.

---

**Product:** SendTo

**Hot Fix:** 942545

**Compatibility:** v6.5.5

**Description:**

Fixed state issues in SendTo involving navigation between different file types.

---

**Product:** SendTo

**Hot Fix:** 942545

**Compatibility:** v6.5.5

**Description:**

Disabled ObjectViewer browser component as a shell drop target. This prevents dropping files into the viewer when it is hosting a web browser for displaying non-image files.

---

**Product:** SendTo

**Hot Fix:** 945027

**Compatibility:** v6.5.5

**Description:**

Fixed state issue in SendTo involving document count. Navigation buttons now display the correct number of documents.

---

**Product:** SendTo

**Hot Fix:** 796003

**Compatibility:** v6.5.5

**Description:**

Added detailed application logging to assist in troubleshooting SendTo issues.

## Server Application Updates

---

**Product:** Archive

**Hot Fix:** 976271

**Compatibility:** v6.5.5

**Description:**

Fixed issue archiving corrupt TCK files, when the overwrite option is enabled. This can result in TCK's growing many times their size.

---

**Product:** InfoWise

**Hot Fix:** 868095

**Compatibility:** v6.5.5

**Description:**

InfoWise performance boost. InfoWise accumulates each document in memory into a single document that is discarded after a Print Job is finished. This code change allows disabling the Print Preview document from being created. When implemented, this change can drastically decrease processing time when processing several dozen or more documents.

---

**Product:** InfoWise

**Hot Fix:** 868095

**Compatibility:** v6.5.5

**Description:**

Added configuration setting for DPI when printing. Decreasing the resolution results in smaller file sizes and can result in a performance increase.

---

**Product:** InfoWise

**Hot Fix:** 628187,729561

**Compatibility:** v6.5.5

**Description:**

Added ability to force output to 1, 8, 24, or 32-bit color in order to reduce file size when needed.

## Remoting aka Proxy Server Updates

---

**Product:** Proxy

**Hot Fix:** 572249

**Compatibility:** v6.5.5

**Description:**

Added support for High-bit characters in Notes, Bookmarks, Saved Searches, Index Fields, Revision Comments, and Coversheets.

---

**Product:** Proxy

**Hot Fix:** 597013

**Compatibility:** v6.5.5

**Description:**

Fixed display of revision history in Query.

---

**Product:** Proxy

**Hot Fix:** 589889

**Compatibility:** v6.5.5

**Description:**

Query Restrictions for modification rights only were not working over proxy.
