

Unlock the Power of Content with Intelligent Capture

Paperwise Intelligent Capture, or document extraction, allows your company to organize content to work for you by automatically acquiring, digitizing, indexing, sorting and matching your content with your existing business system data.

5-STEP PROCESS OF INTELLIGENT CAPTURE

- 1 Document Capture:** Documents imported from any source including email attachments, scanners, multi-functional devices, and Paperwise mobile apps.
- 2 Document Classification:** Artificial intelligence algorithms and machine learning are used to classify the document into various categories based on overall placement of content and images.
- 3 Text Extraction:** Key pieces of OCR-generated text are extracted based on predefined rules or patterns.
- 4 Validation:** If a document does not meet the processing criteria, the document is routed to an exception queue for correction as necessary.
- 5 Integrated Workflow:** Documents and information pulled from the documents are stored in a secure archive then injected into business processes for approval, comparison with other documents, or other business processes. Integrations with other systems provide decision-making data to keep you efficient.

BENEFITS

- Audit trail - maintains historical processing information
- Reduces manual data entry
- Increases efficiency
- Validates data
- Decreases paper dependency
- Enhances document organization
