

Trimble TruckMate TMS

Founded in 1989, Paperwise has a long line of experience working with a variety of transportation customers that utilize Trimble Systems® and their suite of products.

Familiar with TruckMate TMS, Paperwise quickly knew that Bay & Bay needed a more enhanced integration. While implementing Paperwise Symphony for TruckMate, our engineers crafted enhanced integrations and functionality.

Trimble offers a Paperwise connection that provides a very flexible interface with menu integrations throughout the product. Through this connection, users can pick and choose which areas they would like to image enable. Paperwise can add additional functionality that can allow systems to work even more efficiently, so as to provide our customers with even greater business process advantages.

THE BENEFITS

Automate daily AR tasks such as rendition, factoring and POD uploads that typically take time and effort to perform.

Offer visibility to documents for drivers, customers, vendors, and internal personnel to allow for self servicing.

Create tasks and workflows that increase efficiency and ensure accountability, compliance, and visibility.

Identify documents and automate data extraction to initiate processes or import into current TMS and ERP systems.

“The Paperwise integration with TruckMate provides quick, seamless access to scanned documents to our people on the front lines. Additionally, it enabled our back office teams to gain tremendous efficiency when scanning and indexing documents. By giving the teams an interface to a familiar environment, TruckMate, the end user adoption and satisfaction has been extremely high.”

Rob Adams, Chief Information Officer
Bay & Bay Transportation

Implementing an efficient system can significantly enhance the efficiency of your operations, reduce bottlenecks, and improve the financial performance of your trucking company. Contact our team at Paperwise today to transform your operations within your transportation company.
