Challenge #1: Defining the Right Requirements

The Problem

Many businesses dive into automation projects without a clear understanding of their specific needs. This often leads to solutions that don't fully address the business's pain points.

The Solution

Partner with a vendor who invests time in understanding your business processes in detail. A vendor like Paperwise doesn't just provide a generic solution; we take the time to collaborate with your team, map out workflows, and identify inefficiencies. This ensures the proposed solution aligns perfectly with your operational goals.

Why It Matters

Automation tools often come with rigid templates that require businesses to adjust their processes to fit the tool, rather than the other way around.
